ILYA KISELEWSKI

+7(962) 024-6553 ◇ Moscow, Russia
ikiselewsk@yandex.ru ◇ linkedin.com/in/ilya-kiselewski ◇ github.com/ikiselewskii

SKILLS

Programming Languages	Go, Python, Bash
Libraries	Gin, Gorilla, bun, uber-go/fx, Aiogram, Asyncio, SQLAlchemy, FastAPI
Technologies	Docker, PostgreSQL, Redis, K8s(argocd, k9s), Nginx, gRPC, Postman, raft, El
Languages	Russian(native), English(C2), Spanish(B1)

WORK EXPERIENCE

Software Engineer Lofty August 2024 - October 2025

- Developed a b2c marketplace for e-goods(steam keys, in-game currencies, etc) MVP from scratch in Golang with mongodb and redis in two months following a tight project schedule
- Scaled MVP into a proper highload-resistant project with Temporal, DragonflyDB, PostgreSQL, Opensearch and Redpanda managing 10000s RPS, implemented event-sourcing and built reliant business workflows and a dozen of microservices
- Made important decisions in architectural discussions on product- and performance-related issues, discussed and groomed feature-requests with a Product-Owner
- Maintained company's legacy projects, deployed previously dockerized applications on a Kubernetes infrastructure

Software Engineer Cloud.ru April 2023 - December 2023

- Developed an HTTP-request logging aggregation system for an S3-compatable distributed storage written in Go
- Utilized gRPC to communicate data between different services in a raft-based distributed system
- Applied test-driven development technique to implement HTTP handlers present in S3 API
- Fixed inconsistencies with API responses to make the system compliant with S3 Documentation

Backend developer Herbarium Games February 2022 - March 2023

- Developed average-sized telegram bots and web apps for outsource customers
- Maintained performance with thousands of simultaneous users with asynchronous code in Python
- Used docker to encapsulate apps in a predictable environment
- Deployed projects on Yandex Cloud‘s EC2 and serverless functions

EDUCATION

BCS in Information Systems & Technologies, National Univeristy of Science & Technology "MISiS" '2024
Relevant coursework: Bezier Curves, Web Development, Machine Learning, Design Patterns, Distributed systems

HONORS & AWARDS

Winner Digital Breakthrough Hackathon 2022, Tomsk

- Set up an asynchronous webserver using Uvicorn and FastAPI
- Deployed Machine Learning prediction models
- Implemented autotesting using GitHub Actions
